

Amendments to the Claims: This listing of claims will replace all prior versions, and listings, of claims in the application

Listing of Claims:

1. (Currently Amended) A medicament application device adapted for using with a medicament container, said medicament container having an opening for dispensing medicament contained in said container to the device, said medicament application device comprising:

a plate defining at least one hole therethrough;

a connector extending from a bottom side of said plate to a proximal end, said connector proximal end being adapted for connecting to said opening of said container, wherein said connector defines an inner channel therethrough, said inner channel being in fluid communication with said opening of said container and said hole of said plate; and

a medicament applicator detachably attached to a top side of said plate, wherein said medicament applicator ~~being is~~ made from a fluid permeable material and is adapted for detaching and replacing.

2. (Original) A medicament application device according to claim 1, wherein said medicament applicator is made from sponge.

3. (Original) A medicament application device according to claim 1 further comprising a cover disposed on a top surface of said medicament applicator, said cover being detachably attached to said plate to secure said medicament applicator on said plate, wherein said cover is made of a fluid permeable material.

4. (Original) A medicament application device according to claim 3, wherein said cover is made from a mesh.

5. (Original) A medicament application device according to claim 1, wherein said plate comprises a plurality of flexible hooks extending from the top side of the plate, and said applicator is detachably attached to said plurality of flexible hooks.

6. (Original) A medicament application device according to claim 1, wherein said plate defines a plurality of relatively small holes near peripheral edges of the plate, and said medicament applicator includes a plurality of protrusions extending from a bottom surface of said medicament applicator, said protrusions being adapted to snap-fit into said relatively small holes.

7. (Original) A medicament application device according to claim 1, wherein said at least one hole comprises a plurality of holes.

8. (Original) A medicament application device according to claim 1, wherein said at least one hole has a star-like shape.

9. (Original) A medicament application device according to claim 1, wherein said applicator includes a porous backing and bristles extending from said porous backing, said porous backing being detachably attached to the top side of said plate.

10. (Original) A kit including a medicament application device according to claim 1, and further comprising:

a medicament container for connection with the connector.

11. (Original) A kit according to claim 10, wherein said kit further includes a bottle of solution.

12. (Original) A kit according to claim 11, wherein said bottle of solution contains a medicament selected from the group comprising:

- (a) moisturizing bath rinses;
- (b) non-steroidal and steroidal anti-inflammatories and/or anti-pruritics;
- (c) anti-infectives; and
- (d) anti-parasitics.

13. (Original) A kit including a medicament application device according to claim 1, and further comprising:

a plurality of the medicament applicators for detachable attachment to a top side of the plate.

14. (Currently Amended) A medicament application device adapted for using with a medicament container, said medicament container having an opening for dispensing medicament contained in said container to the device, said medicament application device comprising:

a plate defining at least one hole through said plate;

a connector extending from a bottom side of said plate to a proximal end, said connector proximal end being adapted for connecting to said opening of said container, wherein said connector defines an inner channel therethrough, said inner channel being in fluid communication with said opening of said container and said hole of said plate; and
bristles on a porous backing extending from a top side of said plate.

15. (New) A medicament application device adapted for using with a medicament container, said medicament container having an opening for dispensing medicament contained in said container to the device, said medicament application device comprising:

a plate defining at least one hole therethrough and having a back side and a top side;

a connector including a plate portion defining at least one hole therethrough and a stem portion extending from a bottom side of said plate portion to a proximal end and defining an inner channel therethrough, said stem proximal end being adapted for connecting to said opening of said container, said inner channel being in fluid communication with said opening of said container and said hole of said plate portion and said hole of said plate, said plate being connected to, and detachable from, said connector; and
a medicament applicator attached to said top side of said plate, said medicament applicator being made from a fluid permeable material.

16. (New) A medicament application device according to claim 15, wherein said medicament applicator is attached to said top side of said plate by gluing.

17. (New) A medicament application device according to claim 15, wherein both said plate and said plate portion define a plurality of holes.

18. (New) A medicament application device according to claim 15, wherein said plate includes walls extending upward from one side of said plate and flanges extending inward from the top of said walls, said walls defining an interior region with an opening at a back edge of said plate, wherein said plate portion is capable of being slid into said interior region from said opening.

19. (New) A medicament application device according to claim 18, wherein said plate portion is releasably locked in said interior region using a resilient tab having a protrusion thereon.
